

## The Irreplaceable Role of Planned Parenthood Health Centers

Planned Parenthood is a leading provider of high-quality, affordable health care for women, men, and young people, and the nation's largest provider of sex education. Planned Parenthood health centers provided millions of people in the U.S. with contraception, testing and treatment for sexually transmitted infections (STIs), lifesaving cancer screenings, and safe, legal abortion. At least one in five women has relied on a Planned Parenthood health center for care in her lifetime.

- In 2018, Planned Parenthood health centers saw 2.4 million patients. Its centers provided nearly 5 million tests and treatments for sexually transmitted infections; more than 265,000 breast exams; more than 255,000 Pap tests; and birth control to nearly 2 million people.
- Planned Parenthood leads the country with the most up-to-date medical standards and guidelines for reproductive health care and uses clinical research to advance health care delivery to reach people in need of care.
- Fifty-seven percent (57%) of Planned Parenthood health centers are located in rural or medically underserved areas. Planned Parenthood health centers provide primary and preventive health care to many who otherwise would have nowhere to turn for family planning services.
- More than one-third (39%) of Planned Parenthood patients are people of color, with more than 541,000 patients who identify as Latino and nearly 395,000 patients who identify as Black.
- Of Planned Parenthood patients who report their income, nearly 75 percent live with incomes at or below 150 percent of the federal poverty level (FPL), and almost 60 percent of Planned Parenthood patients access care through the Medicaid program and/or the Title X family planning program.

For many people, Planned Parenthood is their only source of care – making our health centers an irreplaceable component of this country's health care system. And as experts in reproductive health care, Planned Parenthood health centers often provide family planning services that other safety-net providers simply do not offer.

• For many people, Planned Parenthood health centers have been their main source of primary and reproductive health care. Research has shown that four in ten (41%) patients rely on a family planning clinic as their only recent source for health care services. <sup>1</sup>

"Specialized Family Planning Clinics in the United States: Why Women Choose Them and Their Role in Meeting Women's Health Care Needs," Guttmacher Institute. New York, New York, Online I. https://www.guttmacher.org/sites/default/files/pdfs/pubs/journals/j.whi,2012.09.002.pdf

- In a study of community health centers (CHCs), over two-thirds (69%) reported referring their patients to family planning providers, like Planned Parenthood health centers, for family planning care. <sup>2</sup>
- A 2017 study found that Planned Parenthood health centers serve more contraceptive clients than any
  other publicly funded health care provider, serving 32 percent of all contraceptive patients, even though
  Planned Parenthood health centers comprise just 6 percent of the provider network.<sup>3</sup>
- The average FQHC site offering contraceptive care serves 320 contraceptive patients in a year.
   The average Planned Parenthood health center has served 2,950 contraceptive patients in a year.
   That's more than nine times as many contraceptive patients each year.
- Many FQHC sites do not offer reproductive care. In fact, in 2015, 40 percent of FQHC locations provided contraceptive care to fewer than 10 patients. In stark contrast, a 2017 study found that nearly all Planned Parenthood health centers offered the full range of contraceptive method options, compared to only 52 percent of FQHC sites. 5
- Using the most recent data available, a 2017 study found that in 57 percent of counties with a Planned Parenthood health center, Planned Parenthood serves at least half of contraceptive patients seeking care at publicly funded providers. In 26 percent of the counties with a Planned Parenthood health center, Planned Parenthood serves five times as many contraceptive patients as FQHCs. <sup>6</sup>

Blocking people from accessing family planning and preventive care at Planned Parenthood health centers comes at too high a cost. Without Planned Parenthood, many people would have nowhere else to turn for care. Those who already face barriers to accessing health care – especially people of color, people with low incomes, as well as people who live in rural areas – would be hurt the most.

- If Congress were to block Medicaid patients from PP health centers, the Congressional Budget Office (CBO)
  estimates 360,000 would be left without health services.
- The CBO also projected that permanently barring Planned Parenthood health centers from participating in federal programs would result in a net cost of \$130 million to taxpayers over 10 years, due to an increase in unintended pregnancies without the high-quality contraceptive care Planned Parenthood provides. 8 It is estimated Planned Parenthood health centers prevent nearly 393,000 unintended pregnancies each year.
- When Texas eliminated Planned Parenthood from its state family planning program, researchers found women had reduced access to the full range of contraceptive methods and likely experienced higher rates of unintended pregnancy. Specifically, researchers found a 35 percent decline in women using the most effective methods of birth control and a dramatic 27 percent spike in births among women who had previously used injectable contraception.

<sup>9</sup> Stevenson, Amanda J, et al. (2016). "Effect of Removal of Planned Parenthood from the Texas Women's Health Program," New England Journal of Medicine. 2016; 374:853-860

Following the closure of Planned Parenthood health centers in Wisconsin and Texas, researchers found that an
increase of 100 miles to the nearest health center resulted in a 6 percent decrease in women obtaining breast
exams, and a 9 percent decrease in women accessing Pap tests. 10

The public health community has been clear – community health centers (CHCs) cannot absorb Planned Parenthood's patients. Blocking patients from coming to Planned Parenthood would cause a national health care disaster, with many people losing all access to the preventive health care they need.

- "... [FQHCs] cannot be expected to deliver contraceptive care to the large numbers of women who currently rely on Planned Parenthood or other Title X-supported providers. In fact to suggest otherwise willfully oversimplifies the considerable challenges FQHCs would face in doing so, and ignores how these proposals put millions of U.S. women at very real risk of being unable to obtain the basic care they need."
   The Guttmacher Institute
- Dr. Georges Benjamin, the head of the American Public Health Association, called the proposal to defund Planned Parenthood and redirect funding to FQHCs "<u>ludicrous</u>." <u>USA Today</u>
- "Proponents of Planned Parenthood "defunding" often assert that other providers will fill the gap.
   They are wrong." Hal Lawrence, Executive Vice President & CEO, American Congress of
   Obstetricians and Gynecologists & Debra Ness, president, National Partnership for Women & Families,
   Annals of Internal Medicine
- "To assume that health centers are in a position to fill the void left by barring a health care provider of Planned Parenthood's importance to Medicaid beneficiaries ... is simply wrong." - Sara Rosenbaum, George Washington University, Health Affairs
- "The AMA cannot support provisions that prevent Americans from choosing to receive care from physicians and other qualified providers, in this specific case, those associated with Planned Parenthood affiliates, for otherwise covered services." The American Medical Association
